With Slim, LED lighting makes a step forwards.

With a simple form, which is the result of a complex design, Slim is an object full of technological innovation designed by Giugiaro Architettura for Fosnova (Disano illuminazione). It has the typical appeal of new design trends and the quality of industrial products: small, simple-to-use, versatile, and with technologically advanced performance.

Slim takes full advantage of the LED technology with a highly innovative product: the particular location of LEDs within the fixture generates, through its complex optics design, a reflected light capable of ensuring the maximum level of comfort and functionality.
