1887 Rodio LED - asymmetric

Housing: in die-cast aluminium with cooling fins.

Reflector: in PMMA, highly resistant to temperature and UV radiation.

Diffuser: 5mm thick tempered glass, resistant to thermal shocks and impacts.

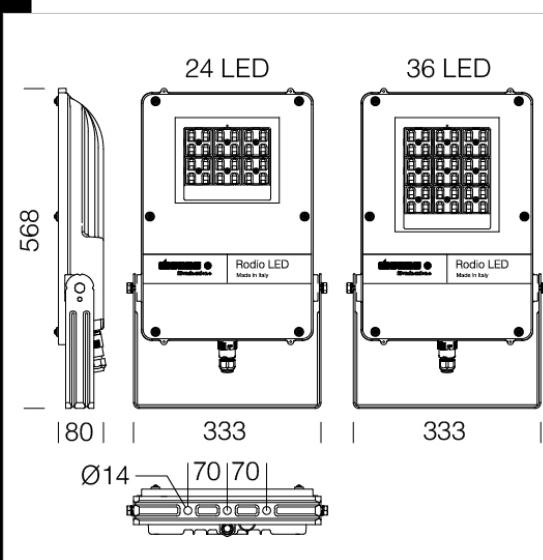

Coating: the standard powder coating consists of a first metal surface pre-treatment stage and of single layer of UV-stabilised, corrosion and salt resistant polyester powder coating.

Equipment: external connector for quick installation. Silicone rubber gasket; external screws and bolts in stainless steel; air recirculation valve. Electronic safety device to protect the LED module and the related ballast compliant with EN 61547. It works in two modes: - differential mode: surge between power cables and between the phase and neutral. - common mode: surge between power, L/N and ground cables or between the fixture's body if it is of class II and installed on a metal pole. Upon request: protection up to 10kV. coating compliant with UNI EN ISO 9227 Corrosion tests in artificial atmospheres for aggressive environments. Power factor: >= 0.9 low flicker

Luminous flux maintenance 80%: 80000h (L80B20)

Wind surface: L:390cm² F:1420cm².

Special version (with conformal coating treatment with subcode -38) featuring high chemical resistance for environments with high chlorine content.

Accessories

- 333 pole mounting diam. 60

- 334 pole mounting diam. 76

- 350 protection guard

The reported luminous flux is the flux emitted by the light source with a tolerance of ± 10% compared to the indicated value. The W tot column indicates the total wattage absorbed by the system without exceeding 10% of the indicated
